

administering the Lifeline program. The IPERA sets forth an acceptable error rate for federal executive agencies managing disbursement programs. *Improper Payments Elimination and Recovery Act of 2010*, P.L. 111-204 (Jul. 22, 2010); 31 U.S.C. § 3321, note. Under the IPERA, federal agencies are required to conduct risk assessments of programs the agencies administer and identify programs susceptible to “significant improper payments.” *Id.* “[S]ignificant improper payments” under the IPERA are, for fiscal years prior to September 2012, those that exceed either (1) 2.5% of program outlays and \$10 million of all program payments or (2) payments of \$100 million.¹⁸ The IPERA’s establishment of additional compliance requirements that are applicable only to those improper payments defined as significant¹⁹ is a tacit acknowledgement by Congress that it is not reasonable to expect that a federal agency disbursement program will ever be completely error-free.

Nor will Lifeline ETCs be held to a standard of perfection in the upcoming biennial audits that must be conducted by ETCs that receive \$5 million or more in Lifeline support in a year. The WCB released draft standards for the audits on September 30, 2013. *See Wireline Competition Bureau Seeks Comment on the Lifeline Biennial Audit Plan*, Public Notice, DA 13-2016 (rel. Sept. 30, 2013) (“Lifeline Biennial Audit Plan Notice”). With respect to an ETC’s procedures for determining subscriber eligibility (Objective III), the Biennial Audit Plan proposes a reasonable standard for a significant error rate rather than an expectation of 100% perfection. In the fieldwork test procedures for examination of the ETC’s policies and procedures, the Biennial Audit Plan directs auditors to randomly select at least 100 subscribers from the ETC’s subscriber list for testing. Testing would examine the eligibility information

¹⁸ The IPERA’s 2.5% significant improper payment threshold decreases to 1.5% for fiscal years beginning after September 30, 2012. IPERA §§ 2(a)(3)(A)(ii)(I).

¹⁹ *See e.g.*, IPERA § 2(c).

collected on subscriber certification forms to ensure its completeness. *Id.*, Attachment 2 at 17-18. This analysis, however, does not require that certification forms be complete in every single instance. Instead, auditors are directed to test the first 50 subscribers randomly sampled. If – and only if – the auditor finds an error rate of more than 5% during its examination of the first 50 forms, then the auditor proceeds with a more in-depth assessment and examines the remaining selected subscribers. *Id.*²⁰ Thus, the Plan adopts thresholds that recognize a certain level of error is inevitable and does not threaten program objectives.

These standards (and others like them) recognize that a certain level of errors will occur regardless of the robustness of the procedures that are followed. Such errors are inevitable. Because of this, it is critical that an ETC know what procedures it may follow to insulate itself from potential liability for duplicates that nevertheless may escape detection. Such protection can come from the establishment of a safe harbor for duplicate prevention.

Safe harbors are used by the Commission for precisely this purpose. For example, in the context of Universal Service Fund contributions, the Commission has a long-established a safe harbor for wholesale carriers to use in determining whether its customers are resellers. *See* 2013 Form 499-A, Instructions at 22-23. Under that safe harbor, if a wholesale provider follows the guidance provided in the FCC's instructions, it will be deemed to be in compliance with FCC rules. Wholesaler-Reseller Clarification Order, ¶ 51 ("A wholesale provider that complies with all of the guidance in the Form 499-A instructions will be afforded a "safe harbor"-*i.e.*, that provider will be deemed to have demonstrated a reasonable expectation"). Critically, this safe harbor applies (and the wholesale provider is not required to make USF contributions on the

²⁰ Notably, for purposes of this examination, auditors are instructed to disregard forms collected from subscribers before the effective date of the most recent Lifeline reforms, in June 2012. Lifeline Biennial Audit Plan Notice, Attachment 2 at 18 n. 20.

revenues) even if the reseller ultimately fails to make its required contributions on the resold revenues. That is, even if an error actually occurs, the wholesale provider is absolved of liability if it has followed the safe harbor procedures. *Id.*, ¶ 38.

B. The Commission Should Establish a Safe Harbor

Easy Wireless requests that the Commission establish a safe harbor for Lifeline providers that engage in reasonable and diligent duplicate screening methods and procedures. Under such a safe harbor, a Lifeline provider that has conducted appropriate due diligence to identify duplicate subscribers will not be liable for retroactive reimbursements to the Universal Service Fund and will not be subject to forfeitures or other penalties if USAC or the FCC, through additional scrutiny, determines that an account is a duplicate.

The safe harbor should identify the steps a Lifeline ETC should take in order to check for duplicate enrollments in its own records. Easy Wireless respectfully suggests that these steps should be satisfied by evidence that the ETC (1) has obtained a valid certification from the subscriber attesting, under penalty of perjury, that the subscriber is not receiving another Lifeline-supported service, *and* (2) has submitted the subscriber's record to an electronic screening process using the NLAD (when available) or, where the NLAD is not available, using a state database, a third-party database of subscribers or the ETC's own subscriber records.

The first element of this proposed safe harbor flows from the 2012 Lifeline reforms. Under those reforms, the Commission requires Lifeline ETCs to obtain certifications from prospective customers that contain certain required information. Among such information, these forms must inform customers that:

- Only one Lifeline service is available per household;
- A household is not permitted to receive Lifeline benefits from multiple providers, and;

- Violation of the one-per-household limitation constitutes a subscriber's violation of the Commission's rules and will result in the subscriber's de-enrollment from the program.

47 C.F.R. § 54.410(d)(1). Further, the rules require that the subscriber certify under penalty of perjury that:

- The subscriber meets the income-based or program-based eligibility criteria for Lifeline benefits;
- The subscriber will notify the carrier within 30 days if for any reason he or she "is receiving more than one Lifeline benefit";
- The subscriber's household will receive only one Lifeline service and, to the best of his or her knowledge, the subscriber's household is not already receiving a Lifeline service; and
- The subscriber acknowledges that providing false or fraudulent information to receive Lifeline benefits is punishable by law.

47 C.F.R. § 54.410(d)(3).

Receipt by a Lifeline ETC of a certification from each relevant subscriber that satisfies Section 54.410(d) of the rules should satisfy the first prong of the safe harbor.

The second prong – electronic screening of subscriber records – should be satisfied by evidence that the Lifeline ETC follows acceptable procedures to check for duplicates prior to enrollment and submission of a request for reimbursement from the Fund. Where the NLAD or a state database is available, the ETC should be required to screen using that database in order to benefit from the safe harbor. Absent the NLAD or a state database, the ETC should have the option to use a third-party database or its own database of subscribers to conduct a duplicates check.

Importantly, this prong of the safe harbor would be satisfied by the use of an electronic screening process. If the records match using the logic employed in the eligibility database, then

the carrier must treat the subscriber as a duplicate subject to exceptions.²¹ If the records do not match using the logic employed in the eligibility database, however, then the subscriber is not a duplicate for purposes of the safe harbor.

Provided that the Lifeline ETC can demonstrate compliance with both prongs of the safe harbor – (1) receipt of a certification form satisfying Section 54.410(d) and (2) electronic screening through the NLAD or other appropriate database – then the ETC would not be subject to retroactive liability for enrollment of the subscriber. If, after additional review via an IDV or otherwise, USAC or the FCC concludes that an account is a duplicate, the Lifeline ETC would be required to de-enroll the account as instructed. However, the Lifeline ETC would not be required to return any Lifeline benefits received prior to the determination that the account is ineligible. More importantly, the Lifeline ETC would not be subject to any potential fines or penalties for having enrolled the subscriber or having requested reimbursement for the subscriber prior to the USAC or FCC determination. As with the safe harbor for wholesale providers in the USF contributions process, compliance with the safe harbor procedures would be sufficient to discharge the Lifeline ETC's duties to check for duplicate enrollments.

CONCLUSION

For the reasons explained above, Easy Wireless requests that the Commission vacate the December 2013 IDV findings regarding intra-company duplicates. In so doing, Easy Wireless requests that the Commission further clarify that under existing policy, only accounts with exact matching information in all required fields may be deemed to be duplicates based on available

²¹ In such an instance, an ETC could obtain additional evidence in order to demonstrate the subscriber's eligibility for a Lifeline benefit. This additional evidence may consist of an Independent Economic Household form or other evidence demonstrating that the subscriber is not a duplicate.

subscriber information. Finally, Easy Wireless requests that the Commission establish a safe harbor for Lifeline providers to follow in the future when checking for duplicate enrollments.

These actions will protect and promote the efficient administration of the Lifeline program. Commission action to clarify its duplicates policy, correct the erroneous USAC findings and to establish a safe harbor for duplicate detection can restore balance to the program. By taking the actions above, the Commission will increase compliance with the Lifeline program's requirements, will promote responsible Lifeline practices and will further the policy goals of the program.

Respectfully submitted,

SUMMARY

Easy Telephone Services Company d/b/a Easy Wireless ("Easy Wireless") respectfully seeks review of a decision of the Universal Service Administrative Company ("USAC") conducting in-depth validations ("IDV") of Easy Wireless's Low-Income Support Mechanism reimbursement claims in Kentucky and Oklahoma. Easy Wireless submits this request in order to confirm that, under existing Lifeline program rules and orders, Lifeline accounts containing different subscriber information are not "duplicates." Easy Wireless requests that the Commission instruct USAC to cease classifying as a "duplicate" accounts where the subscriber data is similar but not identical. Further, if the Commission modifies its rules to address such similar accounts, it should provide specific guidance to enable USAC and the industry to determine with specificity which types of variances are significant and which are not. Commission action on this key point will benefit USAC and the industry alike in applying the Lifeline rules and ensuring that the program operates efficiently and minimizes the perception of or potential for waste, fraud and abuse.

In the decision for which Easy Wireless seeks review, USAC conducted an IDV of Lifeline subscribers in two states. In the IDV, USAC concluded that a small number (representing approximately 0.32% on average) of Easy Wireless accounts that contained similar but not the same subscriber information were nevertheless "duplicates." USAC does not reveal the methodology it used to determine duplicate subscribers. Clearly, USAC's conclusions require substantive policy determinations that go beyond the guidance the FCC has provided to USAC for conducting IDV reviews. Moreover, USAC's methodology appears to ignore differences in subscriber information fields required by the Commission to be collected as of June 2012. Easy Wireless therefore requests that the Commission vacate the December 2013

IDV findings regarding intra-company duplicates. In so doing, Easy Wireless requests that the Commission take three actions to address uncertainties caused by accounts with similar, but not identical, customer information:

First, Easy Wireless requests that the Commission clarify that a Lifeline account is a duplicate only if all of the mandated subscriber identification information matches. The Commission further should instruct USAC to cease classifying as a “duplicate” accounts where the subscriber data is similar, but not identical. Second, because the Commission has not previously determined that accounts with similar, but not identical, subscriber information are to be treated as duplicates, Easy Wireless requests that the Commission vacate USAC’s IDV findings with respect to the small number of alleged intra-company duplicates found. Third, Easy Wireless requests that the Commission prospectively establish a safe harbor for Lifeline providers that engage in reasonable and diligent duplicate screening procedures. Under such a safe harbor, a Lifeline provider that has conducted appropriate due diligence to identify duplicate subscribers will not be liable for retroactive reimbursements to the Universal Service Fund and will not be subject to forfeitures or other penalties if USAC or the FCC, through additional scrutiny, concludes that the account belongs to the same subscriber despite the difference in subscriber data.

These actions will protect and promote the efficient administration of the Lifeline program. Today’s confusion among Lifeline providers as to the standard to which they will be held – exacerbated by excessive and unreasonable Notices of Apparent Liability (“NALs”) recently issued by the Commission – undermines the very foundation of the Lifeline program. If every Lifeline ETC were exposed to fines at levels consistent with the recent NALs for what USAC has identified as duplicates, no rational provider would remain in the program, and low-

income consumers would be harmed by a scarcity of available services. Commission action to clarify the meaning of a “duplicate” and to establish a safe harbor for duplicate detection can restore balance to the program. By taking the actions above, the Commission will increase compliance with the Lifeline program’s requirements, will promote responsible Lifeline practices and will further the policy goals of the program.

REQUEST FOR REVIEW

Easy Telephone Services Company d/b/a Easy Wireless ("Easy Wireless"), by and through its attorneys, and pursuant to Section 54.719(c) of the Federal Communications Commission's ("FCC's" or "Commission's") rules, respectfully requests that the Commission review and vacate findings regarding intra-company duplicates rendered by the Universal Service Administrative Company ("USAC") in connection with in-depth validations ("IDV") of Easy Wireless's Low-Income Support Mechanism benefits in Kentucky and Oklahoma.¹ USAC's December 2013 IDV findings regarding intra-company duplicates exceed FCC guidance and otherwise reach results that impermissibly ignore differences in FCC mandated subscriber data fields by concluding that accounts which contain similar but not identical subscriber information are nevertheless duplicates. Easy Wireless respectfully submits that USAC has usurped the FCC's role and has engaged in substantive policy judgments that only the

Letter from USAC to Tina Allen, Easy Telephone Services, re: Federal Universal Service Low Income Support Mechanism In-Depth Validation Phase 21, Dec. 30, 2013 (attached as Confidential Exhibit 2).

Commission, not USAC, may make. Therefore, Easy Wireless requests that the Commission (1) confirm that, under existing policy, Lifeline accounts containing different subscriber and/or address information cannot be deemed duplicates, (2) vacate the intra-company duplicate findings in the IDVs, and (3) establish a safe harbor that will ensure Lifeline ETCs conduct a reasonable level of due diligence in detecting potential duplicates.

I. FACTUAL BACKGROUND AND STATEMENT OF ISSUES

A. The Commission's Duplicates Policy

The Lifeline program was established by the Commission in the 1980s with the purpose of providing telecommunications service to low-income households. 47 U.S.C. § 254. Codified by Congress in 1996, the program initially provided a discount to eligible consumers for a single telephone landline at a principal residence. In recognition of the changing marketplace, the FCC expanded the program in 2005 to include non-facilities based providers, including wireless carriers. More recently, the Commission recognized that “a cell phone can literally be a Lifeline for families and provide low-income families, in particular, the means to empower themselves.” *In re Lifeline and Link-Up Reform and Modernization*, Report and Order and Further Notice of Proposed Rulemaking, FCC 12-11, ¶ 17 (rel. Feb. 6, 2012) (“2012 Lifeline Reform Order”).

Seeking to balance the availability of Lifeline with the funds available for the program, the Commission limits a subscriber to receiving only one Lifeline-supported service. 47 C.F.R. § 54.409(c); see *In re Lifeline and Link-Up Reform and Modernization*, Report and Order, FCC 11-97, ¶ 2 (rel. June 21, 2011) (“2011 Duplicative Payments Order”). In 2011, the Commission clarified that each eligible consumer is entitled to only one Lifeline benefit and required Lifeline ETCs to inquire whether a subscriber or potential subscriber is already receiving a Lifeline discount from another carrier. 2011 Duplicative Payments Order, ¶¶ 8, 9. The Commission also

ordered USAC to develop a process for detecting and resolving duplicative claims and outlined the basics of a de-enrollment process when duplicate accounts were discovered. *Id.*, ¶¶ 13-15.

The Commission further addressed duplicate subscriptions in its seminal Lifeline Reform Order in February 2012. *See generally*, 2012 Lifeline Reform Order. In the 2012 Lifeline Reform Order, the Commission's principal focus was to address acknowledged shortcomings in its Lifeline rules that contributed to real and perceived waste, fraud and abuse in the Lifeline program. *Id.* To that end, the Commission imposed significant new procedural requirements for qualifying and enrolling new Lifeline subscribers. *See, e.g.*, 2012 Lifeline Reform Order, ¶¶ 60-285 (requiring Lifeline ETCs to review eligibility documentation and requiring proof of eligibility to be presented at the time of enrollment). In addition, the new rules required certain disclosures to be made to consumers – including, notably, the disclosure that only one Lifeline benefit per household is permitted – and required new subscribers to sign a certification under penalty of perjury that they are not already receiving Lifeline supported service. *See, id.*, ¶¶ 69, 91. Further, the new rules expanded the identifying information to be collected when enrolling subscribers, such as requiring Lifeline ETCs to collect the subscriber's date of birth and last four digits of his or her Social Security Number ("SSN"). *See, id.*, ¶ 118. Finally, the Commission adopted measures to resolve potential duplicates, such as the Independent Economic Household form for use when multiple economic units reside at the same address. *See, id.*, ¶¶ 69, 76-78.

Notably, however, neither the 2011 Duplicative Payments Order nor the 2012 Lifeline Reform Order defined a "duplicate" for these purposes. Neither order defines a "subscriber" for purposes of determining whether the subscriber receives more than one Lifeline-supported service. In order to thwart duplicate enrollment attempts, the Commission now requires Lifeline ETCs to obtain multiple pieces of information about each subscriber: first name, last name,

address, date of birth and last four digits of the subscriber's SSN. No Commission rule, however, addresses how to handle variations in that information. Finally, although the Commission adopted a one-per-household rule and defines "household," it does not have any rules in place for resolving conflicts in address information in order to determine whether the one-per-household rule comes into play.

The Commission's signature long-term protection against duplicate enrollments will be the National Lifeline Account Database ("NLAD"). The FCC directed USAC to create a database of Lifeline subscribers so that duplicates can be identified and eliminated. *Id.*, ¶¶ 179-187. As the Order states "[t]here is widespread agreement that a permanent solution to duplicative claims requires that ETCs are able to determine if a prospective subscriber is already receiving a Lifeline benefit at the time the subscriber requests service or seeks a Lifeline benefit from that ETC" and, to that end, directed USAC to create a database that is capable of providing verification upon inquiry of whether a subscriber is already receiving Lifeline support. *Id.*, ¶ 199. The Commission's Wireline Competition Bureau ("WCB") and USAC have been working to develop the NLAD with input and support from Easy Wireless and other industry stakeholders. The database currently is not scheduled to become fully operational until early in 2014 – more than a year after the Commission's deadline.²

B. The USAC December 2013 IDV Findings

In the decisions under review, USAC conducted IDVs of Easy Wireless's Lifeline reimbursement claims in two states. USAC examined the March 2013 Lifeline reimbursement requests in the state of Kentucky and the April 2013 Lifeline reimbursement requests in the state

² The first NLAD state (Maryland) went into "live" production on February 13, 2014 and, according to the revised schedule released on December 27, 2013, the final group of states will not go into "live" production until March 27, 2014. See <http://usac.org/li/tools/nlad/nlad-migration.aspx> (last checked Feb. 25, 2014).

of Oklahoma. On December 30, 2013, USAC issued a decision finding **BEGIN**

CONFIDENTIAL **END CONFIDENTIAL** intra-company duplicates out of the **BEGIN**

CONFIDENTIAL **END CONFIDENTIAL** customers listed on the Form 497 for

Kentucky. *See* Confidential Exhibit 1. The so-called duplicates found by USAC in the

December 2013 Phase 18 IDV represented only 0.24% of Easy Wireless's Lifeline subscribers in Kentucky.

On the same day, USAC issued a decision finding **BEGIN CONFIDENTIAL** **END CONFIDENTIAL** intra-company duplicates out of the **BEGIN CONFIDENTIAL**

END CONFIDENTIAL customers listed on the Form 497 for Oklahoma.³ *See* Confidential Exhibit 2. The so-called duplicates found by USAC in the December 2013 Phase 21 IDV represented only 0.40% of Easy Wireless's Lifeline subscribers in Oklahoma.

Even if the Commission determines that every one of the alleged duplicates contained in the December IDV findings actually is a duplicate, Easy Wireless's effective duplicate detection rate would be 99.68%.

Despite USAC's findings, these alleged duplicates are not, in fact, duplicates. In each case, there are differences in subscriber data. The differences in subscriber data fall into several categories. All of the accounts alleged to be intra-company duplicates contain differences in subscriber name and/or address data. Notably, all of the accounts alleged to be intra-company duplicates contain differences in the subscriber last name, date of birth, and/or SSN information

³ It appears that these IDV findings – like many others – are duplicative. For example, **BEGIN CONFIDENTIAL** **END CONFIDENTIAL** of the alleged duplicates listed on the spreadsheet for Phase 21 in Oklahoma (reviewing April 2013 subscriber data) are already included on the list of alleged duplicates for Phase 17 for Oklahoma (reviewing March 2013 subscriber data). *See* Easy Telephone Services Company Request for Review, WC Docket Nos. 11-42, 03-109 (Dec. 30, 2013).

(last four digits).⁴ A single letter or digit difference in any one of these subscriber information fields would result in the accounts passing the duplicate detection screening now in place for seeding the NLAD (*i.e.*, the NLAD would not identify these accounts as duplicates).

C. Question Presented

The December 2013 IDVs find that certain accounts containing similar information are intra-company “duplicate” accounts belonging to the same subscriber. This request for review challenges these findings and the standard used by USAC to render them. Specifically, this request raises the following central question for review: can accounts with subscriber information that is similar but not identical be deemed a “duplicate” under the Commission’s current Lifeline program rules and orders?

⁴ The failure by USAC and the Commission to review date of birth and SSN information is patently inconsistent with the Commission’s requirement that consumers provide it and that ETCs collect it. *See* FCC Supporting Statement, OMB Control No. 3060-0819 at 7 (Apr. 2012) (“The information collected [including last four digits of SSN and date of birth] is used to determine consumer eligibility for Lifeline and to calculate low-income universal service support. Without the requested information, ineligible subscribers could receive support from the Fund along with consumers who do not even use the supported service. *Moreover, without the new rules, ETCs could serve the same subscriber with Lifeline, resulting in duplicative program payments.* Finally, failing to collect the information would prevent the Commission from implementing section 254 of the Act and may make it difficult for the Commission to ensure that only eligible consumers receive Lifeline service and eligible carriers receive reimbursements from the low-income fund.”) (emphasis added). Moreover, it flies in the face of the Bureau’s guidance to ETCs indicating that all subscriber information should be reviewed for the purpose of determining which accounts are duplicates. *See Wireline Competition Bureau Announces Duty to Query the National Lifeline Accountability Database*, WC Docket No. 11-42, Public Notice at 2 (rel. Jan. 14, 2014) (“ETCs should use all information available to them, including the information collected as part of their obligation to transmit information to the NLAD, to identify and eliminate household duplicates.”); *Wireline Competition Bureau Announces That the National Lifeline Accountability Database Will Begin Accepting Subscriber Data in December*, WC Docket No. 11-42, Public Notice at 3 (rel. Oct. 23, 2013) (“ETCs should use all information available to them, including the information collected as part of their obligation to transmit information to the NLAD, to identify and eliminate household duplicates.”).

II. THE FCC MUST ESTABLISH ADDITIONAL RULES TO DETERMINE WHAT VARIANCES IN SUBSCRIBER INFORMATION CAN CONSTITUTE A “DUPLICATE”

The intra-company duplicate findings in the December 2013 IDVs exceed USAC’s role as an impartial administrator of the Fund because they represent an attempt by USAC to fill a gap in the FCC’s rules and orders. Several relevant FCC orders reference duplicates but none provides adequate guidance for determining when an account that contains different information from that contained in another account can constitute a duplicate. While this may seem at first blush to be a simple task, in practice, it is not. With electronic screening, a potential duplicate will not have an exact match in every data field relating to a subscriber (name, address, date of birth, SSN, etc.). Instead, variations appear in accounts, such as differences in customer names, dates of birth, SSN information and addresses. The Commission has never concluded that such variances may be dismissed and, as a result, accounts with similar but not identical subscriber information, can constitute a duplicate. Even if some variations were to be deemed insignificant, the determination of which variations are significant and which are not requires subjective decisions to evaluate the differences in required customer information. The Commission, not USAC, is the only entity empowered to render such a policy decision.⁵

A. The FCC Has Not Defined an Account with Different Information as a “Duplicate”

Notably, despite Commission decisions that eligible subscribers should not receive more than one Lifeline-supported service, no FCC rule or order defines or describes what constitutes a duplicate. In the 2011 Duplicative Payments Order, the Commission adopted a rule that “no qualifying customer” is permitted to receive more than one Lifeline subsidy concurrently. 2011

⁵ 47 C.F.R. § 54.702(c); see *The Conference Group, LLC v. FCC*, 720 F.3d 957, 960 (D.C. Cir. 2013) (USAC “has no policy or interpretive role”).

Duplicative Payments Order, 26 FCC Rcd at 9027 (¶ 8).⁶ A “qualifying customer” is not defined in the order. The Commission states only that this rule addresses “duplicative Lifeline subsidies received by the *same individual*.” *Id.* at 9028 (¶ 11) (emphasis in original). Again, what subscriber data determines whether an individual is the same is not defined.

Concurrent with the 2011 Duplicative Payments Order, the WCB issued instructions to USAC for conducting IDVs. *See* DA 11-1082, Letter from Sharon E. Gillett, Chief, WCB, to D. Scott Barash, Acting Chief Executive Officer, USAC (June 21, 2011) (“IDV Guidance Letter”). With respect to duplicates on the same provider’s network, the Bureau’s guidance refers to only two types of such “duplicates,” both of which require an exact match of relevant information. First, in what it refers to as Track 2-A duplicates, the Bureau describes “different individuals, same address” as duplicates. For these duplicates, the provider will look for “other information in its possession” which either validates or refutes the existence of a duplicate. Second, the Bureau refers to “intra-company duplicates,” which it describes as “same name, same address” duplicates. *Id.* at 5. Critically, no guidance is provided for determining whether variations in a name or address can somehow constitute the “same name” or “same address.”

USAC, which may only implement FCC policies, not create them,⁷ similarly has provided little to describe how it interprets the FCC’s guidance concerning these two categories of duplicates. In its IDV training materials, USAC states only that it has built a “Low Income Duplicate Detection System” to (1) “standardize addresses” through the U.S. Postal Service’s address matching system and (2) conduct name comparison using “lexical and phonetic

⁶ The Commission adopted a parallel rule to require a Lifeline ETC to offer one Lifeline service per “qualifying low-income consumer” that is not currently receiving Lifeline service from that or any other provider. *Id.*

⁷ 47 C.F.R. § 54.702(c) (“The Administrator may not make policy, interpret unclear provisions of the statute or rules, or interpret the intent of Congress. Where the Act or the Commission’s rules are unclear, or do not address a particular situation, the Administrator shall seek guidance from the Commission.”).

approaches” to determine name variances. Presentation, FCC-USAC Joint Training Event, In-Depth Data Validations, June 19, 2012, at 11. USAC does not disclose what “lexical and phonetic approaches” are used, nor does it state whether any manual processes or judgments are used to identify or resolve conflicts.⁸ USAC also does not state how, if at all, other subscriber information (date of birth, last four digits of SSN) the Commission has required to be collected will be used in examining accounts and determining whether any are duplicates. Moreover, nothing in the IDV decisions explains how USAC concluded that accounts with variances in information were deemed to constitute a duplicate.

B. USAC Could Not Have Concluded That the Listed Accounts Were Duplicates Without Applying an Additional Standard

None of the FCC’s orders provides sufficient information for USAC to make the intra-company duplicate findings that it rendered in the December 2013 IDVs. The FCC’s IDV guidance to USAC only addresses situations where the relevant information is an exact match (*i.e.*, involves the “same name” and “same address”). Critically, this now-dated guidance includes no instruction as to the consideration of other required subscriber information, including date of birth and SSN information. Because the accounts found by USAC to be intra-company duplicates involve differences in customer account information, USAC was unable to lawfully conclude based solely on the FCC’s guidance – or otherwise in a manner consistent with Lifeline program rules – that the accounts were duplicates.

⁸ Most recently, the WCB has proposed audit procedures for the Lifeline Biennial Audits that would require independent auditors to define a “subscriber” as having a match of name, date of birth **and** last four digits of the SSN. See *Wireline Competition Bureau Seeks Comment on the Lifeline Biennial Audit Plan*, Public Notice, DA 13-2016, at Attachment 2, p. 15 (rel. Sept. 30, 2013) (“Lifeline Biennial Audit Plan Notice”) (emphasis added). Moreover, independent auditors are instructed to conduct this review “using computer-assisted audit techniques,” suggesting that an electronic data matching is an acceptable duplicate screening process. *Id.*

Each of the duplicate accounts identified by USAC contains one or more differences in FCC-mandated subscriber information. In all instances, the alleged duplicate accounts contain some variation in the customer name and address data. All of the accounts contain differences in subscriber information fields, including differences in last name, date of birth and SSN information that would result in these accounts not being rejected as duplicate accounts by the NLAD as it is presently set for seeding. For example, USAC identified accounts where the customer name differed and the account contained a difference in customer date of birth, last four digits of SSN, or both. USAC also identified accounts with address differences and a difference in date of birth, last four digits of SSN, or both. These accounts do not fit within the “same name, same address” category specified in the IDV Guidance Letter. In order to address these accounts, USAC would have had to apply an additional standard to determine whether, despite the differences in information, the account was sufficiently the same to constitute a “same name” or “same address.” That standard, of course, is not contained in the FCC’s guidance to USAC.

Similarly, the FCC’s guidance is not helpful in determining how other differences in subscriber information may be ignored or disregarded so as to reach the conclusion that two accounts belong to the same individual. The IDV Guidance Letter was issued before the Commission amended its rules in the 2012 Lifeline Reform Order to require ETCs to collect identifying information such as date of birth and the last four digits of SSN. The IDV Guidance Letter only discusses two pieces of information that an ETC collects – customer name and customer address. None of the FCC orders provide guidance on how the additional information that ETCs now are required to collect – such as date of birth and SSN information – are to be considered to determine whether a similar customer name and/or address represents one or two

individuals. Here again, USAC appears to have impermissibly filled in the gap in guidance with its own (undisclosed) standard that appears to simply disregard differences in date of birth and SSN information. A standard that ignores such information cannot be squared with Commission's requirement to collect such information.

These problems demonstrate the core deficiency in the Commission's "duplicates" guidance to date. Electronic screening techniques typically are used to identify accounts with identical information. Electronic screening techniques are not particularly effective in identifying or resolving other variations that may appear in subscriber data. Names may have different spellings or different suffixes, such as "Sr." or "Jr." Addresses may have different house numbers, apartments and unit numbers. For others, the name and/or address information may be the same, but the SSN and/or date of birth information may differ.⁹ Every one of these variances requires a rule to resolve whether the differences indicate a separate subscriber account or a duplicate. The FCC's guidance to date, however, does not supply a rule for addressing such differences.

C. The FCC Must Clarify its Guidance for Evaluating Duplicates

In order for USAC and the industry to address these types of differences, additional guidance from the Commission is necessary. Easy Wireless respectfully submits that this guidance should be provided promptly.

The Commission must clarify that, under existing policy, a Lifeline account may be deemed a duplicate based on subscriber provided information only if all of the mandated

⁹ Under the Commission's rules, June 2012 and later accounts contain additional subscriber information fields (*i.e.*, date of birth and last four digits of SSN) not required to be collected upon enrollment for accounts established prior to that date. These discrepancies make it impossible to compare the two accounts on an apples-to-apples basis. *See* Lifeline Biennial Audit Plan Notice, at Attachment 2, p. 18 n. 20 (discarding pre-June 2012 accounts from the process review portion of the audit).

subscriber identification information matches. The Commission must instruct USAC to cease classifying as a “duplicate” accounts where the subscriber data is similar, but not identical. Unless and until the Commission modifies its rules to establish standards for addressing similar, but not identical, account information, USAC simply cannot conclude based on available information that accounts with different subscriber information are duplicates.

If the Commission modifies its rules to address such similar accounts, its guidance should be as specific as possible in identifying which types of variances are significant and which are not. If, for example, the Commission requires Lifeline ETCs to collect name, date of birth and last four digits of SSN, should all three of those pieces of information be an exact match in order to conclude that the person is the “same individual?”¹⁰ If some variances in these data points will be disregarded, the Commission should identify which ones those are.¹¹

Similarly, with respect to addresses, the Commission would need to identify how conflicting information should be resolved. For example, if two accounts have different apartment numbers (Apt. 101, Apt. 304, etc.), is a Lifeline ETC permitted to conclude that this information, by itself, represents a different household?¹² Similarly, if one address lacks a unit

¹⁰ This is the standard proposed for the Lifeline Biennial Audits. *See* Lifeline Biennial Audit Plan Notice, at Attachment 2, p. 18.

¹¹ As of this date, the NLAD’s duplicate detection logic differs from that proposed for Biennial Audits in that differences in first names would be disregarded.

¹² Other carriers have noted the same concerns. In their comments on the Lifeline Biennial Audit Plan, Verizon and Verizon Wireless reported:

In Verizon’s experience, USAC sometimes identifies subscribers as receiving duplicate support when, in fact, they do not. For example, USAC has identified persons with the same last name who live in the same apartment building (i.e., who have the same street address) as receiving duplicate support, when those persons had different first names and lived in different apartments. In other words, USAC sometimes identifies customers as duplicates when they actually appear to be separate, eligible subscribers.

Comments of Verizon and Verizon Wireless, Lifeline Biennial Audit Plan, WC Docket No. 11-42, at 12-13 (filed Dec. 13, 2013).
